Cohesive  
Integral

As Bk  
approaches

S4 1/2 - very professional + workmanlike + intelligent  
in how it's all put together, engineered, constructed,  
organized, etc.

S4 1/2 - technology or advanced; very sophisticated in  
its approach: "like" few of principles employed  
are new or innovative, but the utilization,  
- synthesizing combination of equipment +  
principles, through a logical [development] a  
projection of former technology, is still very  
advanced + expands greatly the capabilities,  
operating parameters and use of the system  
involved.

5412 "Zones" of involvement. One "zone" (not necessarily physically defined) comprises all things directly related or supporting the "nerve center" or "operations center". Outside that (figuratively) there are other agencies or groups or organizations that are there to provide some sort of support for the main purpose of the installation, but which are not directly connected. A sense of cold-bloodedness, ~~calculated~~ calculations or cynicism connected of outside "zone" of involvement.

S4 1/2 - military involvement at site - but  
"like" joint services operation - such as DIA &  
NSA is a combo of various military  
branches + disciplines plus Gov. Sec. civilians...

One structure, previously described sloping me, hereafter referred to as "Opus Center" ~ "nerve center," involves sophisticated, likely, defense-related concepts; the idea of an abstract "barrier", "trip wire", "shield", "envelope"; the organization & which is complex, intricately layered, overlapping, layered, & interlocking. There are other sites, perhaps similar in nature connected with it, but ~~not~~ great distances away. Impression of very profound & intelligent engineering/construction/organization involved. Though technology involved is not revolutionary, or innovative; the way it's used, & combined w/ principles results in dramatically <sup>enhanced</sup> capabilities & new uses. ~~The~~ System is automatic, greatly reducing required personnel.

There seem to be nonphysical "zones" of involvement. There are those people & agencies directly connected w/ the Opus Ctr. & its syst.; "outside" of that are people & agencies who are in syst. also but further removed. These people are cold-blooded, cynical, calculating.

West of Opus Ctr. is a cluster or grouping of structures, involving some sort of rounded concept, as well as angular. A lot of open space is involved one yr. ahead, a sense of "protection" + competition + "empire" protection is observed; as well as the sense of a need for validation of some form, concept, idea or approach. "Doubtful" is a relevant concept here.

Cluster of structures not immediately connected

w/ hardware - i.e. missiles, ~~guns~~, or other such  
prosaic type things. People involved present the  
air of unity + teamwork, + sense of mission...  
"prove" their project is all it's meant to be.

Site involves military in a "joint service"  
sense - various branches + disciplines, together  
w/ many civilian specialists + managers.
